

Great Northern Draco

Draco is a Great Northern bean variety ideally suited to Nebraska and Colorado production regions. A consistent performer throughout the trialing process, its upright architecture, direct harvestable and excellent yield potential make it an excellent choice for Nebraska and Colorado growers.

Assuming a 90 lbs./AC yield advantage compared to Marquis.* Growing Draco will potentially increase your profit by \$40/AC on \$45/cwt. beans. This amounts to \$4,000 on 100 acres and the added benefit of upright Architecture and better seed size than Marquis.

- Excellent upright architecture suitable for direct harvest.
- Good yielder on poorer ground or in some stress conditions that other Great Northern varieties may not tolerate.
- Matures 89-95 days or 1 day later than Marquis**
- Approximate seed count is 1,320 sds./lb. compared to Marquis at 1,458 sds/lb.***
- Draco has the 'I' Gene for resistance to Bean Common Mosaic Virus. It has also shown resistance to prevalent strains of rust that currently affect the Nebraska and Colorado growing regions.
