

SR Viper <09303>

**NEW!!
HIGH YIELDING
SMALL RED BEAN!**

Viper was selected and developed in Idaho, and has shown great adaptability throughout its development and commercial seed production in Idaho's dry bean regions. It has also shown broad adaptability in trials throughout the U.S. growing regions and in Canada as well.

Viper is indeterminate, semi-upright in its architecture and provides great yield potential to the grower.

Preliminary yield data from the Magic Valley, Idaho region shows Viper with a yield advantage of 636 lbs./AC over Merlot. Assuming a 636 lbs./AC yield increase over Merlot, profit would increase \$254/AC on \$40/cwt. Beans. This would amount to \$25,400 for 100 AC of production.

- Excellent semi-upright architecture.
- Matures 95-99 days or about 2 days later than Merlot**
- Approximate seed count is 1,658 sds./lb.***
- Good seed color, appearance and shape.
- Viper has demonstrated average canning characteristics.
- Preliminary testing has shown that Viper has resistance to bean common mosaic virus (BCMV).
- Resistant to Rust strains tested for at Colorado State University
